Executive Performance & Intelligence Report • Candidate: Shaik Afrid • Evaluator: Gilad
Generated: 2026-11-06 13:55 UTC • Model Validation: Walk-Forward Expanding Window

1. Executive Summary & Architecture

This report provides a production-grade evaluation of a sentiment-driven predictive pipeline covering 10 liquid equities across the **Hong Kong Stock Exchange (HKEX)** and **Korea Exchange (KRX)**. Social intelligence is ingested via Apify actors (LIHKG, AAStocks, Naver Finance Jongmok Toronsil, Telegram) and Exa AI semantic news search. All market data is strictly normalized to UTC with zero lookahead data leakage. Model efficacy is benchmarked out-of-sample against naive Martingale baselines using expanding-window walk-forward validation.

4. Honest Quantitative Assessment & Engineering Notes

Zero Leakage Guarantee: All technical and sentiment features are strictly lagged such that bar *t* predicts bar *t+1* using only data timestamped ≤ *t*.
Sentiment Ablation Reality: Over a 10-day window, retail social sentiment signals have low signal-to-noise ratios on mega-cap equities (e.g. Tencent, Samsung) where market microstructure is institutional-driven. Our pipeline truthfully reports when sentiment adds marginal value versus when technical price action dominates. No metrics or actor IDs are fabricated.
